

This is in strong protest to the consideration of BPL. To consider this proposal without extensive testing is absolutely ludicrous. The possibility of rendering the entire HF spectrum useless for the benefit of a few is certainly not in the public's interest. Please do not allow this technology to be implemented without extensive research as to the possible consequences of interference to the HF Spectrum. Since 1958 when I received my first radio license, I have always looked to the FCC to "do the right thing" for the people. Please do not let the public down by allowing BPL to become a reality.
